

RUBBER CABLE GLAND RSGU-1

CLAMPS AND TIGHTENING SYSTEMS › RUBBERIZED CABLE GLAND

Pipe clamp in accordance with DIN 3016, suitable for all clamping applications for pipes, cables, cable bundles, cable protection tubes, hoses and other types of pipelines.

The cable glands are made with galvanized or 430 stainless steel tape, shaped and covered in anti-vibration rubber, to ensure and guarantee greater protection of the cables/pipes contained in the cable glands themselves and the absorption of any vibrations. Band adaptable to shape

Reinforced band ends prevents the attachment point from giving way or loosening under high mechanical stress.

Available with a rubber profile as an option, allowing both a high-performance coupling between the clamp and the component to be fixed and vibration dampening.

Benefits overview:

- Simple assembly and safe fixing
- Reinforced band ends for very high mechanical loads
- The rubber profile protects against vibrations, absorbs noise and protects against corrosion
- Supplied opened and ready for use

Applications:

- Machine construction
- Railway industry
- Home appliances
- Agricultural machinery
- Chemical industry
- Construction machinery
- Irrigation systems
- Engine construction
- Naval construction
- Pumps and filters
- Agri-food industry
- Mining industry

MATERIAL PROPERTIES OF THE EPDM RUBBER PROFILE

- Tensile strength [N/mm²] Min. 8
- Elongation at break [%] 350
- Shore A hardness 70 ± 5
- Operating temperature [°C] 40 to +120
- Resistance to: Atmospheric conditions/Ozone Excellent
- Aging/UV rays Excellent
- **Fuel Not suitable**
- **Oils and fats Not suitable**
- Alcohol Excellent Acids Excellent
- Alkali Excellent
- Silicone rubber profile available on request.

Diameter mm	15mm - M6		20mm - M8
