

M210-E21 - Modular lubricator with technopolymer cup

FITTINGS FOR COMPRESSED AIR › COMPONENTS FOR INDUSTRIAL COMPRESSED AIR PLANTS › AIR TREATMENT GROUPS FOR PLANTS

The operation of the **mist lubricator** is based on immediate mixing of the oil. This mixing is optimal even with small air passages. The modular system allows you to assemble several elements from the same family with different functions in a single block.

Connections:

- 1/2" BSP Threads on body
- 3/8" BSP With reduction

General characteristics

- Powder coated metal body.
- Cup with quick coupling in technopolymer (**E/21 series**) or metal (**E/21-P series**) with a capacity of **100 cm³** .
- Oil sight glass in transparent technopolymer with 360° viewing and micrometric adjustment.
- Valve that guarantees lubrication even at low flow rates.
