

VENABIO Multipurpose

HOSES › Pipes for the pharmaceutical industry › SILICONE hoses for the pharmaceutical industry

Platinum-cured silicone tubing provides excellent overall performance and resistance to temperature, humidity, ozone and steam.

This product is the workhorse of most fluid handling applications in manufacturing and filling facilities. It is used upstream, from the preparation of the supports to the collection phase, and downstream, from the first filtration phases to the final filling.

Recommended for transferring fluids at very low pressure in liquid and semi-liquid filling processes. Typical applications are media and buffer preparation, downstream processing, formulation, drug filling and peristaltic pumps.

Outer layer: Platinum cured silicone. Post-cured to completely eliminate volatiles

Reinforcement: No.

Inner layer: Translucent and smooth.

Temperature: -60°C +220°C

ROLL LENGTH: Available in 50 feet and 100 feet (15m - 30m approx)

AVAILABLE INTERNAL DIAMETERS: from 0.80 mm (1/32") to 25.40 (1")
