

M310 Lubricator with technopolymer glass

FITTINGS FOR COMPRESSED AIR › FITTINGS AND CONNECTIONS FOR PNEUMATIC SYSTEMS › F+R+L air treatment units and accessories

The operation of this **mist lubricator** is based on the entrainment of the oil, caused by a pressure difference produced in a duct, equipped with a restriction and crossed by air. The adjustment of the quantity of lubricant mixed with air is accurate as it occurs through a micrometric screw.

The lubricating oil is introduced into the lubricator through the two red technopolymer caps, therefore without having to dismantle the glass.

Connections:

- 1 \square **BSP** Threads on body
- 3/4 \square **BSP** With reduction

General characteristics

- Powder coated metal body.
- Technopolymer glass with a capacity of **400 cm³**
- Glass protection in metal painted with epoxy powders (**M/310-P series**).
- Transparent technopolymer oil sight glass with 360° view
- Micrometric adjustment of oil flow.
- Valve that guarantees lubrication even at low flow rates.
- Brass suction tube with filter
